

Cloud Computing Lab 4:

Deploying Application-I

Due Date: Tuesday, March 2, 2021 (11:59pm).

Student Name: Mohammed alzhrani

Student ID: 2041606

Objective

Deploying enterprise applications onto virtual machines on VMware platform that are hosted on local machines

Equipment, Tools, Hardware, and Software Needed

1. Desktop PC, Laptop with internet connection.
2. VMware Workstation software - free downloadable
3. Ubuntu (live image) - free downloadable. You may download other Operating Systems image.
4. **Apache2 server, PHP, MySQL server**

Theorem

The deployment of an Enterprise Application one of the important practice in cloud computing. Implementing a multitier application on cloud is a vital job.

In this Lab, we will prepare and deploy a Web/Application/Database application to our VMware platform, as shown in the below Figure 1.

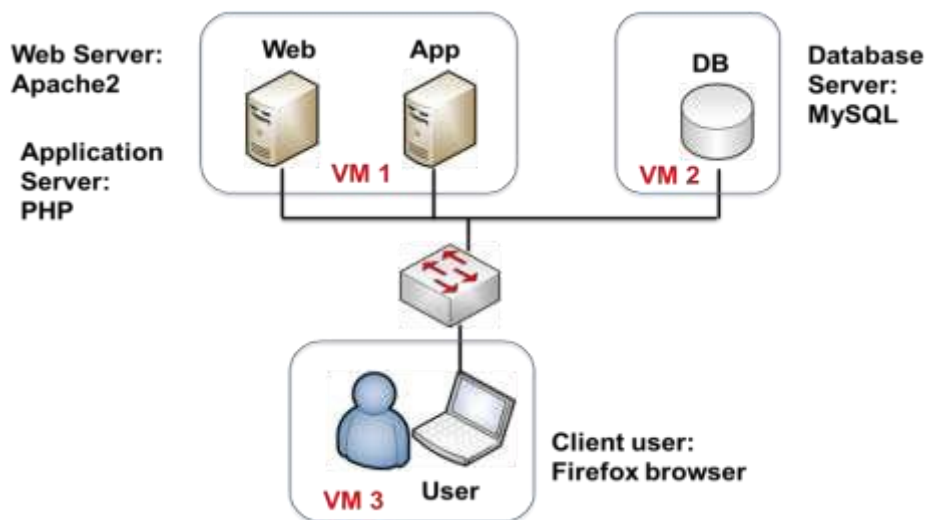

Figure 1 Deploying a Multitier Application

Procedure

***** Note: Use your previous Lab VMs**

To do the deployment we have to do the procedure based on the services in sequence:

First, Web Server – VM 1

Power On VM 1, and do the following installation and implementation steps.

```
sudo apt install apache2
```

```
sudo mv /var/www/html/index.html /var/www/html/index.html.bkp
```

```
sudo vi /var/www/html/index.html
```

press “i” to edit the file, copy and past the following code,

```
<html>
  <head>
    <title>your_domain website</title>
  </head>
  <body>
    <h1>Hello World!</h1>
    <p>This is the landing page of <strong>VM 1</strong>.</p>
  </body>
</html>
```

hit button “esc”

press “:wq”

Check:

Open the internet browser& type:

VM_1_IP_Address

For example: 192.168.74.130

Second, Application Server – VM 1

On VM 1, and do the following installation and implementation steps.

```
sudo apt install php libapache2-mod-php php-mysql
```

```
php -v
```

```
sudo vi /var/www/html/info.php
```

press “i” for editing, and copy & paste the following code:

```
<?php phpinfo();
```

hit button “esc”

press “:wq”

Check:

Open the internet browser& type:

http:// **VM_1_IP_Address** /info.php

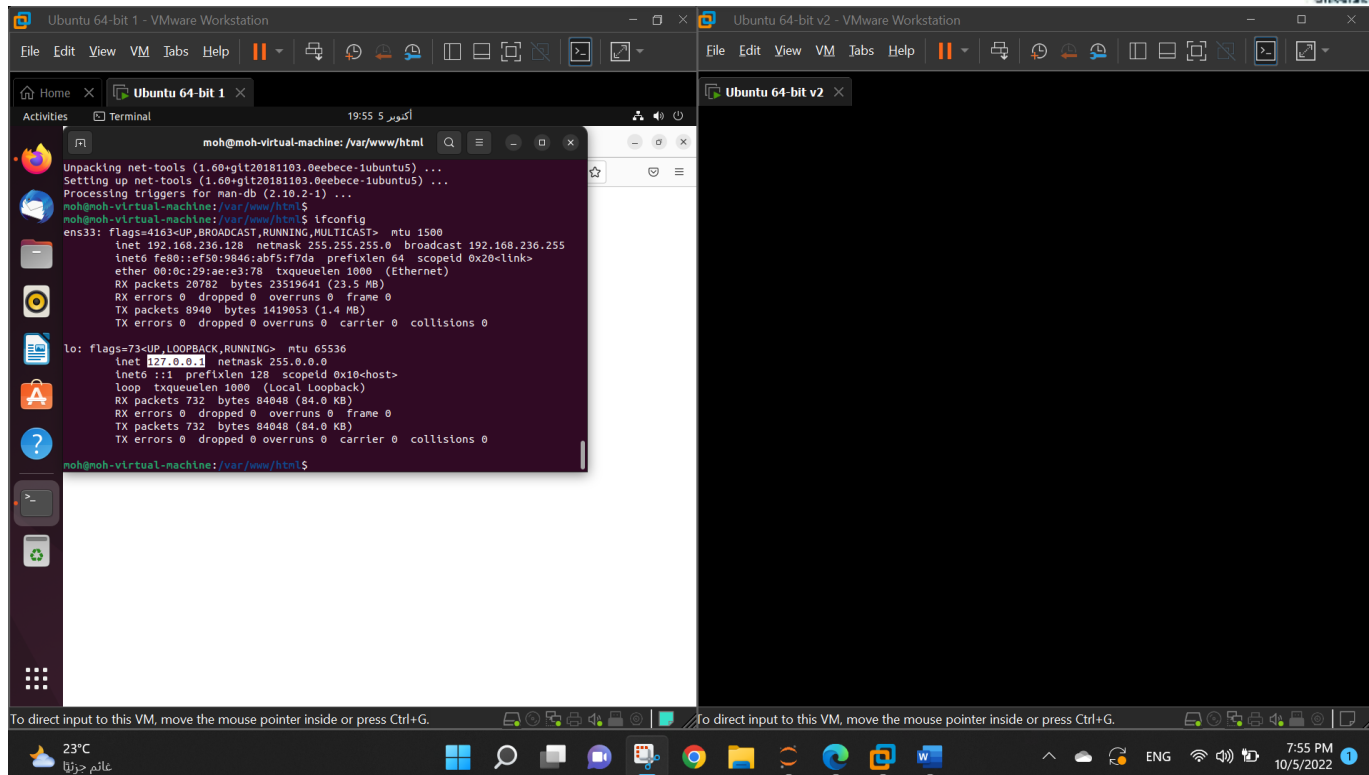

Lab Task

1. Report all outputs of all commands on the procedure above in addition to the below configuration settings.

Lab Report

For the lab report, take a screenshots of your VMware Workstation configuration and include Command Line logs for the Virtual Machines as requested in the Lab Task.

The image displays two side-by-side VMware Workstation windows. The left window, titled 'Ubuntu 64-bit 1 - VMware Workstation', shows a terminal window with the following output:

```
moh@moh-virtual-machine: /var/www/html$  
Unpacking net-tools (1.60+git20181103.0eebece-1ubuntu5) ...
